

SLIDING-SHOE PUMP

Experience for yourself why the Positive Displacement Sliding Shoe Pump is the US Navy and Industry first choice for many applications, particularly where simple, rugged construction, inherent self priming and high suction lift can save time and money.

- Super suction; Self priming
- Self-compensating for wear
- Safely runs during dry suction
- Gives full capacity at high suction lift (to 27 ft)
- Handles clean, dirty and abrasive liquids; extremely viscous or free flowing
- Single cover access to few working parts
- Low shear; low emulsification characteristics (ideal for oil water separators)
- Positive displacement; High efficiency
- Capacities up to 260 gpm
- Pressures up to 250 ft
- Versatile assemblies
